

TURN 100

Complete versatility for the welding of assemblies

THE FUTURE OF ORBITAL WELDING

DESCRIPTION:

Our TURN 100 turntables may be less well known than our standard orbital welding tools (open welding tongs, closed welding tongs, tube-to-tubesheet weld heads) but they are the perfect addition to our range. They enable you to weld components and assemblies even when the workpieces cannot be clamped in any of the tools referred to above. They feature a hollow shaft for forming the assemblies that you are welding.

- 100 mm three-jaw chuck with hollow shaft (16 mm) for forming
- Turntable can be mounted on a model 16 perforated table
- An infinite number of connection options (pneumatic clamping cylinder, tailstock, linear guide units, etc.)
- Variable work plate size
- If necessary, can be mounted on a mobile welding trolley

INCLUDED IN SCOPE OF DELIVERY

- Turntable
- Perforated plate
- Torch holder on 3D articulated arm
- Linear support with 2 limit stops
