Product Overview

SIGLENT's Handheld Digital Oscilloscopes include the SHS800X and SHS1000X models. Both feature 2 analog oscilloscope input channels and are available in 200 MHz and 100 MHz analog bandwidths, a single ADC with 1 GSa/s maximum sample rate, and a single memory module with 12 Mpts memory depth. When two channels are enabled, each channel has sample rate of 500 MSa/s and a standard record length of 6 Mpts. When only a single channel is actived, the maximum sample rate is 1 GSa/s and the maximum record length is 12 Mpts. For ease-of-use, the most commonly used functions can be accessed with its user-friendly front panel design.

The SHS800X series has two non-isolated scope channels and one isolated multimeter channel.

The SHS1000X series features full isolation between the two oscilloscope channels, one multimeter channel, power adapter and the USB host/device port. The full isolation makes it ideal for both laboratory and floating signal measurement because it reduces the risk of accidental short circuits.

The max voltage input to the analog scope inputs is CATIII 600Vrms, CATII 1000Vrms. And the max input for the multimeter is CATIII 600Vrms, CATII 1000Vrms.

The SHS series utilizes a new generation of SPO (Super-Phosphor Oscilloscope) technology that provides excellent signal fidelity and performance. It comes with a vertical input range from 2mV/div to 100V/div, and a max offset range up-to to 400 V.

The innovative digital trigger system delivers high sensitivity and low jitter, and a waveform capture rate of up-to 400,000 frames/sec. The SHS also employs a 256-level intensity grading display function and a color temperature display mode for clarity and fast fault identification.

The SHS' have multiple powerful triggering modes including serial bus triggering as well as free decoding for IIC, SPI, UART, CAN, LIN bus types. The SHS models also include History waveform recording, and sequential triggering that enable extended waveform recording and analysis. Another powerful addition is the new 1 million point FFT math function that gives the SHS very high frequency resolution when observing signal spectra. The new digital design also includes a hardware co-processor that delivers measurements quickly and accurately without slowing acquisition and front-panel response.

The SHS series feature built-in sample and measurement value recorders. The sample recorder can achieve a maximum sampling rate of 25 kSa/s, and can record for up to 22 hours at this sampling rate. The measurement value recorder can simultaneously record 4 sets of measurement values at a recording interval as low as 0.1s which delivers up-to 25 hours of continuous recording.

The SHS series integrates a 6000 count digital multimeter, isolated from the scope that can measure DC/AC Voltage, DC/AC Current, Resistance, Capacitance, Diodes, and Continuity.

A rechargeable 6900 mAh lithium battery supports up-to 5.5 hours (4 hours SHS1000X) of work without a charge.

The handheld oscilloscopes feature a sealed IP51 dust and drip-proof housing and has been tested to IEC60529 to guarantee the ruggedness that is needed to survive harsh environments. A rubberized surface with large keys also makes it easy to use in difficult environments.

Functions & Characteristics

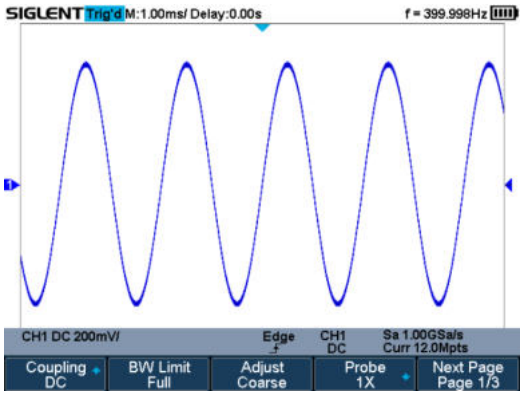
- Front panel and back panel

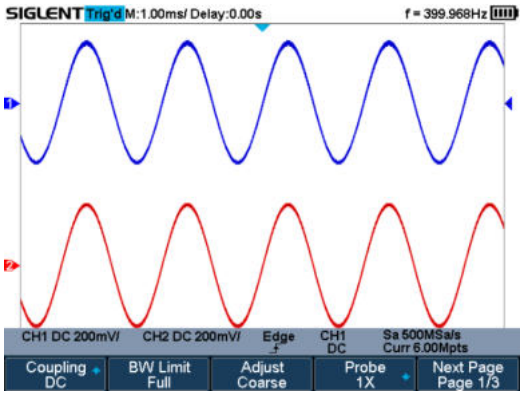
Front panel of the SHS800X series

Rear of the SHS800X series

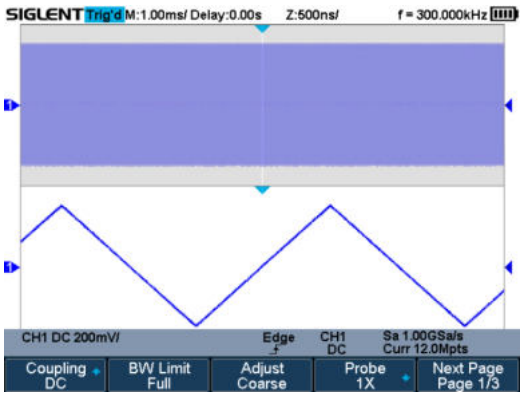
Large bright 5.6-inch TFT -LCD display with 640 * 480 resolution. The most commonly used functions are accessible using 8 different one-button operation keys: Run/Stop, Auto Setup, Default, Cursor, Measure, Display/Persist, Clear Sweep, and Print. More function shortcuts are available combined with the shift button.

- When two channels are enabled, each channel has a maximum sample rate of 500 MSa/s. When a single channel is active, that channel has a sample rate of 1 GSa/s



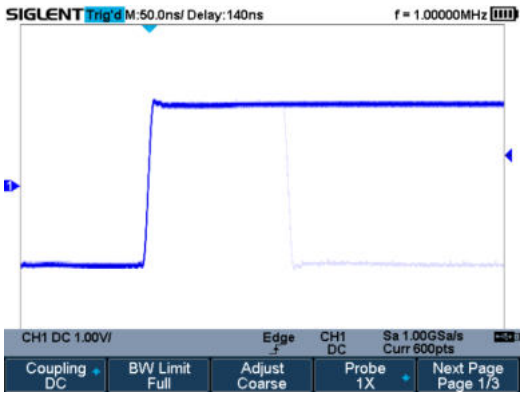


- Record Length of up to 12 Mpts



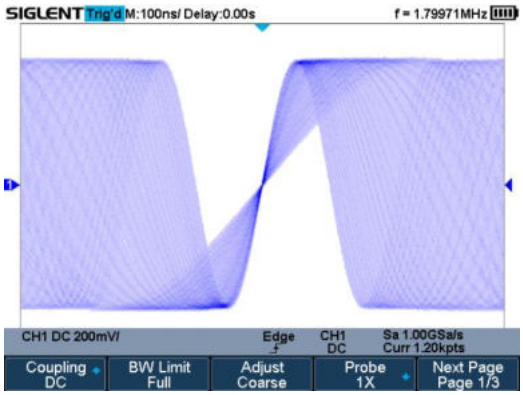
Using hardware-based Zoom technologies and max record length up to 12 Mpts, users can oversample to capture for longer periods at higher resolution and use the zoom feature to see more details within each signal.

- Waveform Capture Rate up to 400,000 wfm/s

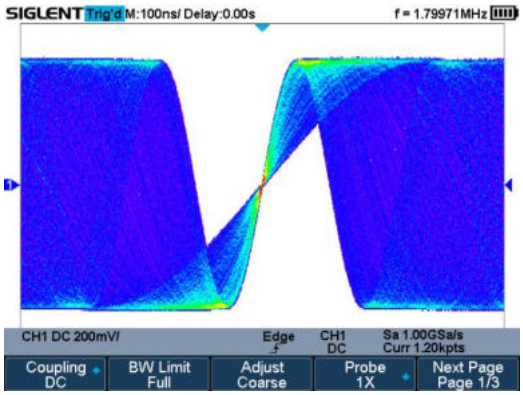


With a waveform capture rate of up to 400,000 wfm/s (sequence mode), the oscilloscope can easily capture unusual or low-probability events.

256-Level Intensity Grading and Color Temperature Display

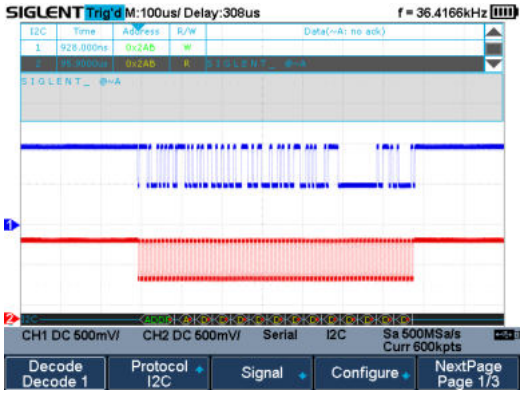


SPO display technology provides fast refresh rates. The resulting intensity-graded trace is brighter for events that occur with more frequency and dims when the events occur with less frequency.



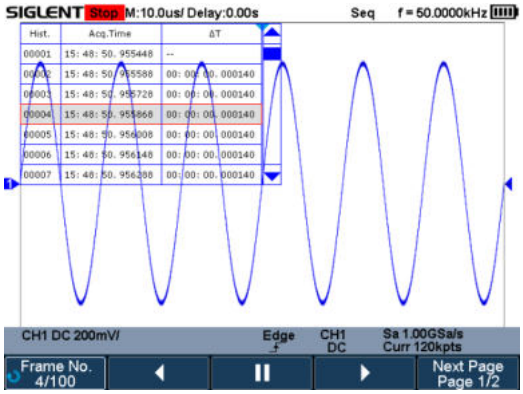
The color temperature display is similar to the intensity-graded trace function, but the trace occurrence is represented by different colors (color "temperature") as opposed to changes in the intensity of one color. Red colors represent events that occur more frequently, while blue is used to mark points that occur less frequently.

Serial Bus Decoding Function



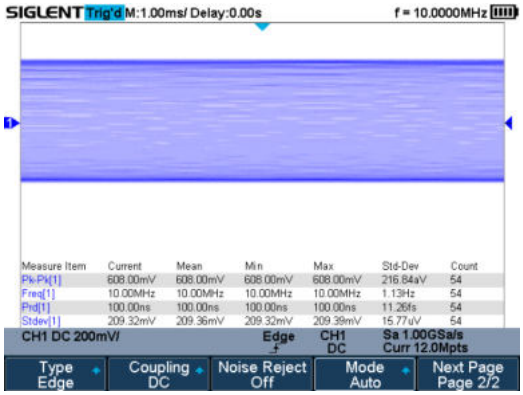
SHS800X/SHS1000X displays the decoding through the events list. Bus protocol information can be quickly and intuitively displayed in a tabular format.

History Waveforms (History) Mode and Segmented Acquisition (Sequence)



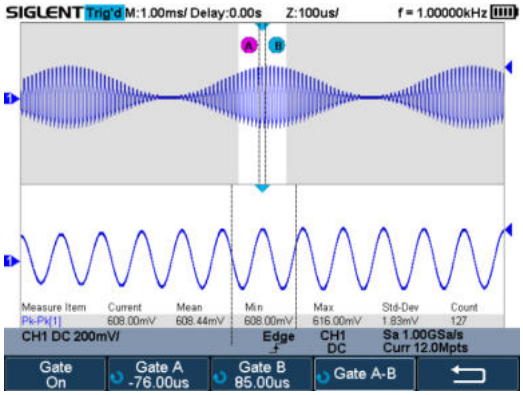
Playback the latest triggered events using the history function. Segmented memory collection will store trigger events into multiple (Up to 80,000) memory segments, each segment will store triggered waveforms and timestamps for each frame.

True measurement to 12 M points



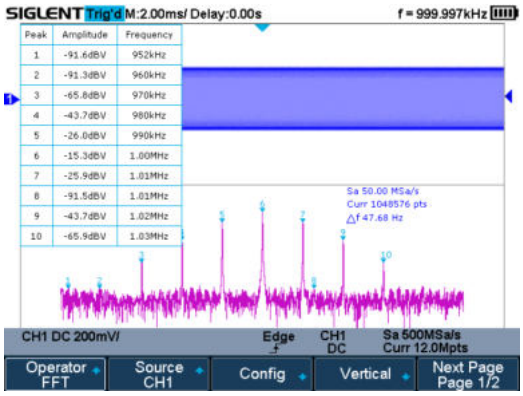
SHS800X/SHS1000X series can measure all sampled data points up to 12 Mpts. This ensures the accuracy of measurements while the math co-processor decreases measurement time and increases ease-of-use.

Gate and Zoom Measurement



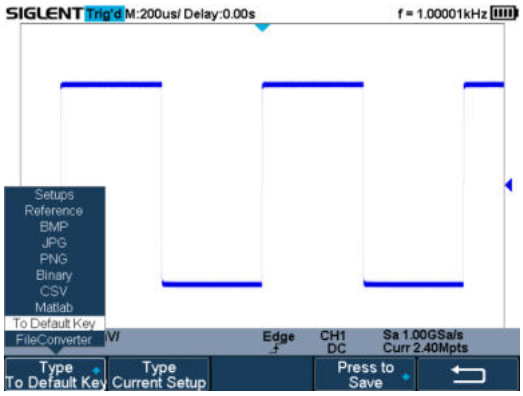
Through Gate and Zoom measurement, the user can specify an arbitrary interval of waveform data analysis and statistics. This helps avoid measurement errors that can be caused by invalid or extraneous data, greatly enhancing the measurements' validity and flexibility.

1M points used to calculate the FFT



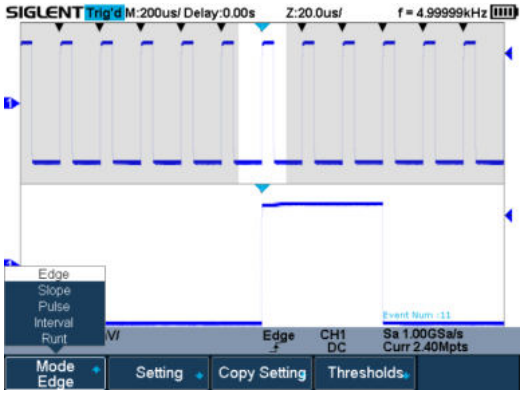
The new math co-processor enables FFT analysis of incoming signals using up to 1 M samples per waveform. This provides high-frequency resolution with a fast refresh rate. The FFT function also supports a variety of window functions so that it can adapt to different spectrum measurement needs. Support Peaks, Markers, a variety of numbers.

Customizable Default Key



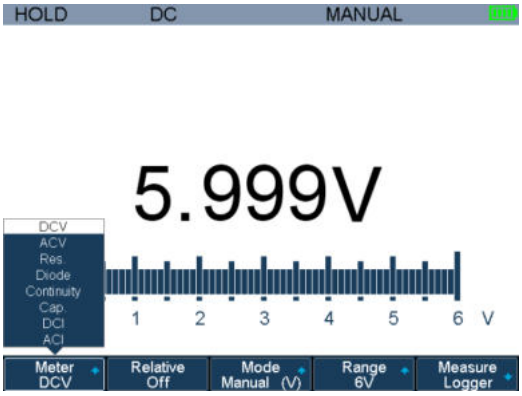
The current parameters of the oscilloscope can be preset to Default Key through the Save menu.

Search and Navigate



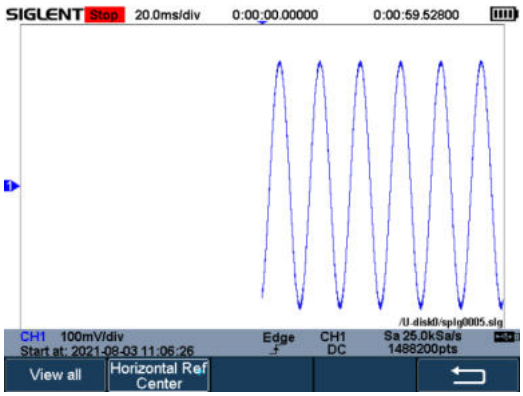
The SHS800X/SHS1000X series can search events specified by the user in a frame. It can also navigate by time (delay position) and historical frames.

6000 Counts Digital Multimeter



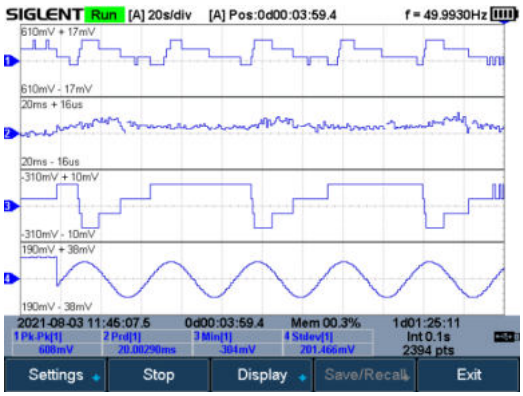
6000 count digital multimeter featured function of DCV, true RMS ACV, DCI, ACI, Diode, Resistance, Capacitance, and Continuity.

Sample Logger



The Sample Logger is the mode of logging the sampling points for a long time. For there are many sampling points to log, they are logged into the internal flash or external U disk in real-time. After stopping logging, the user can recall the sampling points on the oscilloscope, or analyze the saved data on the computer.

Measurement Logger



The measurement Logger is the mode of logging the measurement value for a long time. For the amount of measurement data is relatively small, to process quickly, the data is logged in memory. After stopping logging, the data can be saved into the internal flash or external U disk.

Adapter/Battery

Wall power using the supplied adapter

Battery powered

SHS800X/SHS1000X supports adapter power supply and battery power supply. After connecting the adapter, the battery enters into charging mode. The adapter provides a maximum 4A output current.

SHS800X/SHS1000X uses a UL2054 certified lithium battery package. The battery capacity of 6900 mAh can guarantee long-term operation without an external power supply for up-to 5.5 hours (SHS800X) and 4 hours (SHS1000X). The battery supports an external charger to further meet the requirements of portability.

About SIGLENT

SIGLENT is an international high-tech company, concentrating on R&D, sales, production and services of electronic test & measurement instruments.

SIGLENT first began developing digital oscilloscopes independently in 2002. After more than a decade of continuous development, SIGLENT has extended its product line to include digital oscilloscopes, isolated handheld oscilloscopes, function/arbitrary waveform generators, RF/MW signal generators, spectrum analyzers, vector network analyzers, digital multimeters, DC power supplies, electronic loads and other general purpose test instrumentation. Since its first oscilloscope was launched in 2005, SIGLENT has become the fastest growing manufacturer of digital oscilloscopes. We firmly believe that today SIGLENT is the best value in electronic test & measurement.
