The support structure has to be provided and installed by the customer because they vary from project to project. The following issues must be considered:

**Weight tolerances:** Ensure that the support structure and the floor on which or the wall against which the support structure has to be installed, is qualified to handle the complete weight of the LED display screen.(which can be provided by manufacturer.

**Environmental conditions:** Humidity, wind, temperatures, rain, snow etc.

**Location:** Outdoor/.Indoor, altitude, etc. Usually, for outdoor display screen, the customer should build top cover and side cover for IP protection (Including waterproof and dustproof)

**Ground stability**

**Front clearances:** For making sure there is sufficient free area in front of the LED display screen and respect the maximum viewing angles and distance. Local regulations regarding such installation.
