Livamak / Machinery Canyonn

As Livamak/Machinerycanyon, we started to produce press brakes, guillotine and all kinds of hydraulic presses with our registered Hack Machine company name in our factory with a production area of 2000 m2 in Konya - Turkey, and we started to make a name for ourselves by analyzing the needs of the market in these machine groups and listening to the demands of the customers, and we aimed to expand both domestic and international customer portfolio.

For this reason, it fulfills its duties in the application of the latest technology with the reliability and recognition of all components used in the manufacturing phase. Today, due to supply chain problems, it makes an intense effort to ensure that delivery dates and supply problems are not reflected on its customers and dealers.

In addition, we would like to inform you that we are ahead of all our competitors in this regard by ensuring that both our customers and dealers gain a price advantage at the points where they cannot exceed the price issue with the prices of the machinery and equipment we have procured from our manufacturer partners.

In addition, as Livamak/MC, we work with many manufacturing partners from both Turkey and Europe and Far East companies such as China and Taiwan through our commercial company in order to fulfill the machinery and equipment demands of our customers as well as our manufacturing works, and we supply machinery and equipment in many different categories and groups. In another service, especially in these days of supply problems, we use all our facilities to ensure that the machines of European and Taiwanese origin requested by our customers are delivered to their desired location without dealing with any procedure.
