Gas Valves

VGG...
VGF...
VGH...

- Single valves of class A for installation in gas trains
- Safety shutoff valves conforming to EN 161 in connection with SKP... actuators
- Suitable for use with gases of gas families I...III
- Valves in connection with SKP... actuators open slowly and close rapidly
- 2-port valves of the normally closed type
- ½"... DN125
- The gas valves are used in connection with the SKP... / SKL... electrohydraulic actuators
- As a control valve in connection with SQX... actuators and AGA60 adapter (not as a safety shutoff valve)
- Supplementary Data Sheets on actuators (refer to «Mechanical design»)

The VG... and this Data Sheet are intended for use by OEMs which integrate the gas valves in their products!

Use

The gas valves are designed for use:

- In gas-fired combustion plant
- In gas trains of combustion plant
- As shutoff or control valves in the supply air line of industrial combustion plant with or without heat recovery system

The gas valves provide the following functions:

- Shutoff valve (in connection with SKP1... actuators)
- Control valve with shutoff feature (in connection with SKP2..., SKL25..., SKP5... or SKP7... actuators)

All types of gas valves can be combined with any of these actuators.

Warning notes

To avoid inquiry to persons, damage to property or the environment, the following warning notes should be observed!

Do not open, interfere with or modify the valves!

Any opening of the valve, replacement of parts or modifications to the original product is the user's responsibility and carried out at his own risk!

- All activities (mounting, installation and service work, etc.) must be performed by qualified staff
- When used in connection with gas, the valves constitute part of the safety equipment
- Fall or shock can adversely affect the safety functions. Such valves must not be put into operation, even if they do not exhibit any damage

Mounting notes

- Ensure that the relevant national safety regulations are complied with
- When used in connection with actuators type SKP2..., SKL25..., SKP5..., or SKP7..., the pressure switch for lack of gas must always be fitted upstream of the gas valve
- No special tools are required to assemble valve and actuator
- The actuator can be mounted or replaced while the valve is under pressure
- To prevent cuttings from falling into the valve, first mount the flanges on the pipes and then clean the parts
- Refer to the following Mounting Instructions
 - VGG... / VGF... / VGH... M7636
 - VGG $\frac{1}{2}$ "...3", VGF DN40...80 M7636.1
 - VGF10.655..., VGF10.805..., VGG10.805... M7631.3

Sealings

- No sealing materials are required to assemble valve and actuator
- Check to ensure that the valve is tight when all components are connected

Only with VGF... / VGH...:

- Check to make certain that the bolts of the flanges are properly tightened
- Check to ensure that the gaskets between the flanges are fitted

Mounting position

The valve can be installed in the gas train in any position. The permissible mounting positions of the actuator must be observed, however (refer to the relevant Data Sheet).

Direction of flow

The direction of gas flow must be in accordance with the direction of the arrow on the valve body.

Function

Stem retracts → Valve opens
Stem extends → Valve closes

Installation notes

Gas pressure If the available gas pressure exceeds the valve's maximum permissible operating pressure, it must be lowered by an upstream pressure controller.

Commissioning notes

- In case of corrosive ambient conditions (e.g. when used near the sea), the valve body should be coated with protective lacquer

Standards and certificates

Conformity to EEC directives
 - Electromagnetic compatibility EMC (immunity)
 - Directive for gas appliances
 - Directive for pressure devices

89 / 336 / EEC
 90 / 396 / EEC
 97 / 23 / EC

ISO 9001: 2000
 Cert. 00739

ISO 14001: 2004
 Cert. 38233

For use in the U.S. / Canada, the valves carry type suffix «U» (see example) and and listed (example: VGG10.204U).

Service notes

- Each time a valve has been replaced, check to ensure that the valve operates correctly and that it is tight both internally and externally
- Siemens valves may **only** be overhauled by Siemens HVAC Repair Centers
- VGH... valves are supplied without strainer. Fit a gas filter upstream of the valve or an AGA... strainer (refer to «Accessories») by the gas inlet

Disposal notes

Local and currently valid legislation must be observed.

Mechanical design

Actuators

The gas valves can be combined with the following types of actuators:

Type reference	Data Sheet	Function
SKP10...	N7641	ON / OFF
SKP11...	N7641	ON / OFF
SKP15...	N7643	ON / OFF
SKP20...	N7644	ON / OFF with constant pressure control / zero pressure control
SKP25...	N7643	ON / OFF with constant pressure control
SKP25.7... with SQS37...	N7643	ON / OFF with constant pressure control and electric setpoint adjustment
SKP50...	N7648	ON / OFF with differential pressure control, signal input → differential pressure
SKP55...	N7643	ON / OFF with differential pressure control, signal input → differential pressure
SKP70...	N7651	ON / OFF with ratio control, signal input → static pressure
SKP75...	N7643	ON / OFF with ratio control, signal input → static pressure
SKL25... (only for air)	N7643	ON / OFF with constant pressure control, slow closing 4...6 s, no function of safety shutoff
SQX... with AGA60	N4554	Steady position control, no function of safety shutoff

Type summary (other types of valves on request)

Legend

(also refer to «Dimensions»)

1) Cannot be used with attached pressure governor

2) Flow rate reduced by 20 %

3) On inlet and outlet side

4) Inlet side, VGF...: One connection on each side

Ordering

When ordering, please give the complete type reference.

Actuators must be ordered as separate items.
Valve and actuator are supplied unassembled.

Example:

V...

Flanged valve VGF10.654P DN65

Manual adjuster

AGA61

Adapter for SQX... actuators

AGA60

Consisting of 2 stem parts and a connecting flange

Set of gaskets

AGA66

- In connection with SKPx5... / SKL25... actuators
- Increases degree of protection from IP 54 to IP 65
- Refer to Mounting Instructions M7636.1

Only VGG10.154..., VGG10.204..., VGG10.254..., VGG10.404...:

When used in connection with AGA66, the maximum flow rates are reduced by about 25 %.

Only VGH...

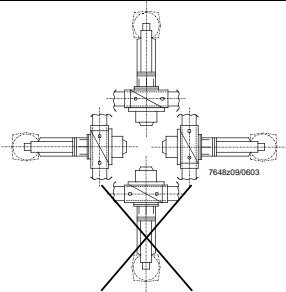

Strainer for valve

With circlip and 1 mm mesh size.

Type reference of valve	Type reference of strainer
VGH10.18050 / DN80	AGA80
VGH10.19050 / DN100	AGA90
VGH10.19150 / DN125	AGA91

The strainers can be fitted in the flange sections of the valves, either on the gas inlet or gas outlet side.

Technical data

General valve data	Valve class in connection with actuator	A conforming to EN 161 (except with SQX... / SKL...)

Sectional view
VGH... complete with SKP2...

Note:

- In the case of burners with low-fire flow rates, select a tightly sized valve (refer to the Data Sheet of the relevant actuator)
- If the available gas pressure exceeds the maximum permissible operating pressure, use an upstream pressure controller to lower it
- The pressure drop (curves of maximum flow) is based on a fully open valve

Conversion

Conversion of air flow rate to a corresponding gas flow rate (natural gas):

Basis for scale

Abscissa	Volumetric flow «QG» in m ³ /h	Density ratio «dv» to air	Conversion factor $f = \sqrt{\frac{1}{dv}}$
1	Air	1	1
2	Natural gas	0.61	1.28
3	Propane	1.562	0.8
4	Town gas	0.46	1.47

Conversion to air (m³ / h) from other types of gases:

$$QL = \frac{QG}{f}$$

where:

QL = air volume in m³ / h that produces the same pressure drop as «QG»

When used in connection with actuators having an integrated governor, the nominal valve size should not be selected too large to ensure good control performance.

Dimensions
